of applying the feature set forth in documents 2 and 3, wherein a collagen layer is provided, to the tube tissue of an artificial blood vessel comprising a synthetic polymer matrix formed of polyglycolic acid with a fiber diameter of 15 $\mu$ m, as set forth in document 1. In addition, a concertina structure is a known feature in artificial blood vessels (see document 4, paragraph [0004] and document 5, paragraph [0044]), and it would be easy for a person skilled in the art to employ said structure as necessary.

The inventions set forth in claims 6 to 8, 10 and 11 do not involve an inventive step in the light of documents 1 to 6 cited in the international search report. In addition to the matters indicated above, document 6 sets forth a technique of optimizing the basis weight of fiber structure in artificial blood vessels. In addition, optimizing the depth and interval of a concertina could be accomplished within the normal creative capacity of a person skilled in the art, and the characterizing features of the inventions set forth in claims 7 and 12 of this application are not acknowledged to offer a particular effect.

The invention set forth in claims 12 to 14 does not involve an inventive step in the light of documents 1 to 7 cited in the international search report.
